A Westinghouse resistance or diverter is shown in Fig 67. Its terminals (by which as just explained the resistance is subdivided) are led to the controller. In order to clearly understand all the different changes and conditions that take place by means of the controllers, it is desirable to make the reader acquainted first with the different modes of circuit connection and their names, and then immediately apply them to standard types of controllers. After the preliminary ex A third way of connecting parts is made Ly a combination of the two above ways. Some of the devices with relation to others are in series with one another and in parallel with others, and such grouping is called series-parallel or parallel-series connection, Fig. 71 explaining this clearly. It represents a condition of grouping of motors on large electric locomotives. There are shown four motors, 1, 2, 3 and 4. Evidently the current splits at A, divides into two currents, one of which flows through motors 1 and 2, the other through motors 3 and 4. The volume of current that goes fl?i/j tanc e through motor...
